

## **For Immediate Release...**

### **Soil Moist Spikes: Water Reduction for Interiorscapers**

**Soil Moist** spikes with and without fertilizer are available in bulk packages of 500 each. The spike is a safe, non-toxic polyacrylamide crosslinked with bisacrylamide. The spike stores over 100 times its weight in tap water, releasing a steady supply of water as your plants need it. Reduces waterings by 50% and remains effective for several seasons.

When placed in the soil, the spike will soften and swell as water is added and absorbed. When the soil dries, the spike will release water to the plant. Soil Moist Plus Spikes adds a 3-4 month 5-5-5 timed release fertilizer along with the water storing polymer.

Soil Moist spikes are not affected by salts in the soil or fertilizer. Ideal for interiorscapes and existing plants, the spikes eliminate the requirement to poke holes in the soil and apply small amounts of polymer. Convenient to use, just push the required amount of spikes beneath the surface of the soil.

JRM features a full line of polymer and mycorrhizal products for the horticultural market.
