

Liquid

For Existing Turf Applications

Soil Moist Liquid is a liquid solution-grade anionic polymer designed to increase soil porosity, minimize runoff, increase infiltration and reduce soil crusting. It is designed to be applied to existing turf surfaces to help retain moisture at the root level thereby reducing waterings and stress. Soil Moist Liquid is a cost effective, environmentally friendly water management aid, and easy to apply to existing turf.

Benefits:

- Increase moisture penetration and uniformity to the plant root zone
- Minimize water use
- Reduces localized dry spots (LDS)
- Increases timing between irrigation cycles
- Enhance turf quality
- Improves soil infiltration
- Aids in root system development by improving soil structure
