

FOR IMMEDIATE RELEASE....

Soil Moist HydroBond Hydroseeding Tackifier Amendment

Soil Moist Hydrobond is a non-toxic linear polymer that is used in hydroseeding applications and is designed to stick or bind the mulch matrix media to the soil particles. The product reduces erosion, increases the performance of the mulch matrix, and is compatible with other hydroseeding amendments. Hydrobond is economical and easy to apply and can also be used as a temporary dust abatement in non-traffic areas.

The product is simply mixed in the hydroseed tank along with mulch and seed.
